

What does it take to setup a pcb manufacturing factory?

Michael, Director at SoonEasy (2009-present)

Updated July 19, 2017

Hi Jigar, thanks for requesting my answer.

Cost pf setting up PCB manufacturing unit in country like India will be too high, Even after setting it up, there are very less chance that you will be able to manufacture it at your existing profit margin. That's the reason giant mobile and electronics companies are setting up their manufacturing unit in China or they are getting it manufactured by companies like (P.s Note: I am director of [SoonEasy](#), one of the China's leading PCB manufacturer).

And the thirdly Man power cost, maintenance cost are going to be too costly in India. And the last one is importing latest technology machinery is going to be too costly.

Overall it will required lots of investment, be ready to bear losses till you capture huge client base.

Still if you want to proceed for setting up the unit, I would request you to consult a machinery supplier. Let me know if I can help you further.

Thanks,

[Michael](#),

Director at SoonEasy

Are you suggesting that your company is using under paid workers to maximize profit?
Are employing some form of modern day slavery?

It's annoying!

It is Oct 2020 now. And there are lot of PCB manufacturers in India. For prototype pcbs, it costs 5–7 times as much as it costs in China(after including the shipping cost). At production quantities, it will still be 2-3 times(or more) costlier in India.

What Michael said in 2017 is definitely true.
